ADVANCED POLYMER INC. INTRODUCES NEW MICROEMULSION FOR AUTOCARE PRODUCTS

Advanced Polymer, Inc. (Carlstadt, NJ) has introduced [APW-319](#), a low turbidity, cationic microemulsion of pure carnauba wax. APW-319 can be used in a variety of applications to impart gloss, slip and resistance to dirt pick up. APW-319 does not contain ethylene glycol or alkylphenol ethoxylates.

When used in products such as spray detail waxes or automotive wash/wax systems, APW-319 will produce a thin, uniform, durable film of wax with excellent gloss and high slip. APW-319 can be used on a variety of substrates including textile, leather, metal, wood and painted surfaces to provide a finish that resists staining and dirt pick-up.

Advanced Polymer, Inc., headquartered in Carlstadt, NJ, has been a respected provider of a variety of technically innovative specialty chemicals for almost 40 years. API works closely with customers to develop compliant materials that enhance the performance of products for a wide range of industries including paint and coatings, auto and marine care, paper and film, textile and leather, lubricants, inks, adhesives and personal care. Further information on Advanced Polymer, Inc. is available on the Internet at www.advpolymer.com.
