

AdvaBond® 8217

Product Overview

AdvaBond® 8217 is a chlorinated polyolefin-based adhesion promoter that provides excellent adhesion to low surface energy substrates, especially PP, TPO and EPDM. AdvaBond® 8217 can be used as a primer or as an additive to a coating and/or adhesive formulation

Physical Properties

COLOR & APPEARANCE:	Clear, Amber Liquid
CARRIER SOLVENT:	Toluene
SOLIDS:	20%
% VOC:	80%
SPECIFIC GRAVITY:	1.00

Applications

- Superior adhesion to PP, TPO or EPDM. Compatible with a variety of different solvents.

Packaging

Available in 8 oz. samples sizes and drum quantities.

Application Methods

If used as a primer: Dilute product in solvent at 1-10% based on actives. Make sure surface is free of any contamination (dirt, oil, grease, or others) Apply dilution via spray, brush or rod ensuring good coverage. Apply topcoat or adhesive once substrate is dry.

If used as an additive: Add product in system at 1-10% based on a weight basis depending on performance and/or cost requirements. Make sure AdvaBond® 8217 is compatible in the system. Apply adhesive as per required rates and application.
